EPIC® DATA M12-RJ45

In the case of storms and snow in the field, the control cabinet must still be clean! This connector ensures a smooth transition of data from the outside to the inside. The control cabinet feed-through connects an M12 patch cable to an RJ45 patch cable and enables perfect sealing.

Lapp

Enables easy transition from M12 to RJ45.
When connected, protection class IP 67 can be achieved on the M12 side.
D-coded or x-coded available.

Designed as a control cabinet feed-through for connecting an M12 connection to an RJ45 patch cable.
For use with assembled data cables (M12D or M12X connector).
